

NSW Cancer Conference 2022 Conference Report

Name: Basel Qenam

Position & Affiliation: Student – University of Sydney

Full Reference: Qenam, Basel A., Ekpo, Ernest, Li, Tong, and Patrick C. Brennan. *Test-set participation may impact cancer detection in screening mammography.*

Presentation Type: Poster

The NSW Cancer Conference was an excellent opportunity for me on many levels. It was my first experience presenting a poster, which allowed me to communicate and have resourceful discussions with multiple people at the event. I also discussed the work with peer PhD students, looking at the directions of future research in breast screening quality improvement. One of the great researchers I met has a PhD supervisor in common, but we never had the chance to discuss our work and how it is related. While our work focuses on improving readers' performance, her work focuses on enhancing reading quality with deep learning. Overall, the reach and the feedback I received were extremely valuable, and even more important was my exposure to the work of great researchers.
