

Name: Kate Dunlop

Position & Affiliation: Research Officer; PhD candidate, Daffodil Centre, The University of Sydney, a joint venture with Cancer Council NSW

Full Reference: Dunlop KLA, Cust AE, Aranda S, Rankin NM. *Acceptability of Risk-Tailored Melanoma Screening: Interviews With Key Informants to Inform Implementation.*

Presentation Type: Poster

Surely this is a winning poster!

Short report

- It was great to attend the NSW Cancer Conference 2022 – the conference was well organised and it was truly enjoyable to be there in person. The highlight for me was the keynote speakers on both days. Maybe this was a result of the smaller state-focused nature of the conference (or just the sheer joy of sitting listening in a large conference room after so long) - whatever the case their presentations felt highly relevant, were interesting and accessible. It was great to have policy experts/leaders such as Prof Tracey O’Brien asking questions from the audience (and the opportunity to meet her and others) and hearing local experts share their current research focus. As a result, I feel more up to date on what’s generally happening in NSW.
- I particularly liked how implementation was a constant theme throughout the conference – many speakers referred to implementation factors as part of their research without making them feel like an additional burden. For me, this is a wonderful way to help normalise the inclusion of implementation factors – I feel like we are moving ahead with research translation.
- The importance of engaging consumers at the planning and dissemination stages of research in addition to including them during the study was a key message of the consumer workshop and posters. I have thought about this since - it would be interesting to explore different models of consumer engagement.
- There was a wide range of great presentations and topics but probably the best outcome for me was that attending such a friendly and relevant conference in person was energising. Thank you!
