**Position & Affiliation:** Ph.D. student, University of Sydney

**Full Reference:** Maha N Aman, Naisana Seyedasli, Shaan Kanagalingam. *Understanding the Impact of Extracellular Matrix and Cancer-associated Fibroblasts in Cancer Progression*

**Presentation Type:** Poster

The NSW conference has been a delightful opportunity to network and present a part of my PhD project. The line-up of novel cancer developments' presentations were very fascinating to watch, but for me, the workshops stole the limelight. It was a very interactive collaboration amongst peers from different institutions held by the end of the event. I registered for a regional health cancer research and care workshop where we collectively down-streamed 2 research proposals out of 5, that were formulated that very instant, both of which aimed for an accessible and sustainable healthcare for the rural population. By the end of these workshops, we voluntarily signed up for these proposals to act and be a part of this worthwhile effort to have a beneficial influence on society.
