Conference/Meeting Name: Multinational Association of Supportive Care in Cancer (MASCC) 2026 Annual Meeting
Location: Melbourne, Australia
Dates: 25-27 June 2026
Presentation Type: Oral presentation

I am grateful to Sydney Cancer Partners for supporting my travel to attend the Multinational Association of Supportive Care in Cancer 2026 Annual Meeting. This society and meeting is one that is very pertinent to my research area, so being able to present my research at this meeting is a very proud achievement. This international meeting was held in Australia this year, and I was excited to be able to host some of my international colleagues.

At this year's conference, my abstract was selected for an oral presentation that generated strong engagement from attendees, prompting numerous questions and sparking discussions about potential future collaborations. The interest in our work underscored its relevance and the growing momentum in this research area.

Our research group also hosted a dedicated CIPN research-update session, providing an opportunity for international colleagues to share ongoing projects, emerging findings and provide feedback on study design. The session strengthened cross-site connections and highlighted the collaborative spirit driving progress in our field.

Thank you very much again to SCP for supporting my attendance at this conference.
